

Chart of the week - Growing economic power in the global south

Investment markets continue to embed a positive outlook for global economic and corporate earnings growth – consistent with limited damage from the impact of high rates. Market implied measures of volatility are at rock-bottom levels, and sentiment is bullish. But geopolitics remains a key risk to this benign outcome for markets.

Heading into H2, a number of significant events in the political calendar could inject more volatility into investment markets – elections in France and the US in particular, will be watched closely. Political risks look to be stacking up.

And more generally, **the global economic system looks more susceptible to geopolitical shocks** now. The global economy is fragmenting. Globalisation is running out of steam. This has come as economic power shifts to Asia and emerging markets – the share of world GDP from the BRICS-plus is set to accelerate in the next couple of decades – allowing them to increasingly flex their economic muscles.

There will be some 'winners' from this global shift. India, Mexico, and Southeast Asian economies such as Vietnam and Malaysia can benefit from the trends of 'friend-shoring' and 'near-shoring'. **Country-level economic performance is set to be increasingly idiosyncratic** – good news for investors hoping to find diversification in their EM allocation. But the big picture consequence is a more volatile and unpredictable economic regime.

Market Spotlight

Premium yields from private credit

The fast-growing private credit market has been well positioned to benefit from the current high-for-longer rates environment. As a largely floating rate asset class, current yields of more than 11% are higher than many other credits, and greater than the historic returns from global equities over the last decade.

After growing rapidly for more than 10 years, new private credit fundraising fell slightly in 2023, to an expected USD200 billion. Recent data suggest that decline has continued in 2024. In part, it's because high rates are putting pressure on some borrowers and reducing demand in areas of the market.

But credit specialists think more certainty on the timetable for rate cuts will reinvigorate the market. And while lower base rates would mean yields easing back from current highs, private credit will remain a relatively high yielding portfolio diversifier that carries an illiquidity premium. Meanwhile, the ongoing retrenchment of banks from many areas in which they were historically dominant should mean the market for private lending continues to grow.

A new regime for rates

Coming into 2024, markets were pricing between five and seven rate cuts for the major western central banks. Now, they are looking for one to three, depending on the central bank in question.

Importantly, this does not just represent a delay to the rate cutting cycle; longer-term policy rate expectations have also shifted up meaningfully over the past six months, from levels that were already well above the pre-Covid norm.

Ultimately, the resilience of economies in the face of high policy rates has convinced markets that the neutral interest rate has risen across economies, and we have moved decisively away from the post-GFC era of ultra-low rates.

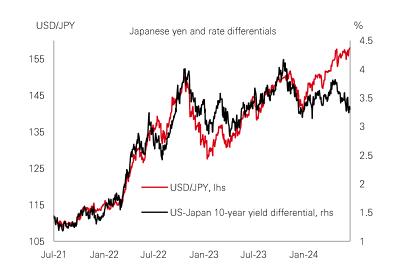

This has left yields across a range of fixed income assets at attractive levels, allowing us to 'put cash to work'. In addition, high quality bonds can provide some protection should any downside growth risks materialise, given central banks have ample room to cut rates if needed.

Year of the yen?

The currency is down 11% year-to-date against the US dollar – hitting a 34-year low. The rationale for a yen resurgence in 2024 was simple – Fed cuts combined with gradual Bank of Japan normalisation. But the Fed has delayed its rate cutting cycle. And the Bank of Japan has underwhelmed with its exit from ultra-accommodative policy – with previous week's BoJ meeting disappointing investors expecting detail on the paring back of its bond buying – leaving the currency vulnerable

H2 could see a revival in the yen's fortunes. We have a scenario for modest dollar depreciation from here as US growth leadership wanes and the Fed tees up its first cut. The yen also looks disconnected from underlying rate differentials. But vital to a recovery of the currency will be more rapid BoJ normalisation which in turn requires greater evidence of sustained inflationary pressures.

Turkey's mega-rally

Turkey's stock markets began 2024 on a solid footing. In early March, momentum was already building, with foreign investors enthused by a shift to more orthodox economic policymaking, and increased activity from a strong domestic retail base. Since then, the MSCI Turkey index has rallied by another 25%.

The Turkish government still seems committed to reducing inflation, with recent news flow indicating that Finance Minister Şimşek will continue to prioritise it. Analysts expect CPI inflation to begin a steep descent from here, falling from 75% in May to around 50% by year end

They think this can help equity multiples continue to edge higher from still-depressed levels (and well below the 10x average before 2017). They also factor in a decent 10% of earnings growth for 2024 and a stellar 38% for 2025, with financials, insurance and service sectors potentially outperforming names more sensitive to higher financing costs and a stronger lira.

Past performance does not predict future returns.

Risk appetite remained positive amid a light week for economic data, with core government bonds largely range-bound. Ten-year French sovereign yields stabilised after the recent sell-off, with the European Commission suggesting that seven EU countries should be added to the EU Excessive Deficit Procedure. In a holiday-shortened week, US equities rose modestly, with the tech-driven Nasdaq testing new highs. The Euro Stoxx 50 index rebounded, led by French stocks, whilst Japan's Nikkei 225 weakened as the yen fell to a two-month low against the US dollar. There was a mixed performance in EM equities, with Brazilin stocks edging higher despite Banco do Brasil pausing its easing cycle. The Shanghai composite index fell modestly amid mixed Chinese data, while India's Sensex was flat. In commodities, oil prices continued to recover on rising demand optimism. Copper and gold rose.

Important Information about the Hongkong and Shanghai Banking Corporation Limited, India ("HSBC India")

HSBC India is a branch of The Hongkong and Shanghai Banking Corporation Limited. HSBC India is a distributor of mutual funds and referrer of investment products from third party entities registered and regulated in India. HSBC India does not distribute investment products to those persons who are either the citizens or residents of United States of America (USA), Canada, Australia or New Zealand or any other jurisdiction where such distribution would be contrary to law or regulation.

The following statement is only applicable to HSBC Bank (Taiwan) Limited with regard to how the publication is distributed to its customers: HSBC Bank (Taiwan) Limited ("the Bank") shall fulfill the fiduciary duty act as a reasonable person once in exercising offering/conducting ordinary care in offering trust services/ business. However, the Bank disclaims any guarantee on the management or operation performance of the trust business.

The following statement is only applicable to PT Bank HSBC Indonesia ("HBID"): PT Bank HSBC Indonesia ("HBID") is licensed and supervised by Indonesia Financial Services Authority ("OJK"). Customer must understand that historical performance does not guarantee future performance. Investment product that are offered in HBID is third party products, HBID is a selling agent for third party product such as Mutual Fund and Bonds. HBID and HSBC Group (HSBC Holdings Plc and its subsidiaries and associates company or any of its branches) does not guarantee the underlying investment, principal or return on customer investment. Investment in Mutual Funds and Bonds is not covered by the deposit insurance program of the Indonesian Deposit Insurance Corporation (LPS).

Important information on ESG and sustainable investing

Today we finance a number of industries that significantly contribute to greenhouse gas emissions. We have a strategy to help our customers to reduce their emissions and to reduce our own. For more information visit www.hsbc.com/sustainability.

In broad terms "ESG and sustainable investing" products include investment approaches or instruments which consider environmental, social, governance and/or other sustainability factors to varying degrees. Certain instruments we classify as sustainable may be in the process of changing to deliver sustainability outcomes. There is no guarantee that ESG and Sustainable investing products will produce returns similar to those which don't consider these factors. ESG and Sustainable investing products may diverge from traditional market benchmarks. In addition, there is no standard definition of, or measurement criteria for, ESG and Sustainable investing or the impact of ESG and Sustainable investing and related impact measurement criteria are (a) highly subjective and (b) may vary significantly across and within sectors.

HSBC may rely on measurement criteria devised and reported by third party providers or issuers. HSBC does not always conduct its own specific due diligence in relation to measurement criteria. There is no guarantee: (a) that the nature of the ESG / sustainability impact or measurement criteria of an investment will be aligned with any particular investor's sustainability goals; or (b) that the stated level or target level of ESG / sustainability impact will be achieved. ESG and Sustainable investing is an evolving area and new regulations are being developed which will affect how investments can be categorised or labelled. An investment which is considered to fulfil sustainable criteria today may not meet those criteria at some point in the future.
